

Budget IT - Mobile Budgeting App Design Document

Budget IT is a Flutter-based budgeting application designed to help users track spending, manage budgets, monitor upcoming bills, and analyse financial behaviour through a modern and responsive interface.

1. UI/UX Design Principles

- The interface follows a user-centred design approach focused on simplicity and clarity.
- The application uses discoverability by making actions visually obvious through icons and labelled navigation.
- Whitespace is used consistently to improve readability and reduce clutter.
- Visual hierarchy is achieved using spacing, font sizes, colour contrast, and card layouts.
- Feedback mechanisms such as charts, highlighted spending cards, and navigation states help users understand system behaviour.
- The design uses a constrained colour palette to maintain consistency and reduce cognitive overload.
- Accessibility principles include large touch targets, strong colour contrast, and readable typography.

2. Design Theme & Visual Identity

Budget IT uses a dark green and cream colour palette inspired by modern finance applications. The colour system creates a calm and professional experience while maintaining strong visual contrast.

Element	Hex	Purpose
Background	#04240C	Primary background
Cream	#DDD6AE	Cards and typography
Blue-Green	#137E84	Charts and progress indicators
Red	#FF0000	Overspending alerts, Warnings

Font : Manrope

Font Sizes : body Font Size = 16; headingFontSize1 = 24; headingFontSize2 = 20; headingFontSize3 = 18;
